A B C D E F G H I J L M O P R S T U V W
All Classes and Interfaces | All Packages | Serialized Form

A

AccessDeniedException - Exception Class in com.mapmyjourney.backend.exception
Excepción para acceso denegado (falta de permisos).

AccessDeniedException(String) - Constructor for exception class com.mapmyjourney.backend.exception.AccessDeniedException

AccessDeniedException(String, Throwable) - Constructor for exception class com.mapmyjourney.backend.exception.AccessDeniedException

addCorsMappings(CorsRegistry) - Method in class com.mapmyjourney.backend.config.CorsConfig

addMember(Long, AddMemberRequestDTO) - Method in class com.mapmyjourney.backend.controller.TripMemberController
1.

AddMemberRequestDTO - Class in com.mapmyjourney.backend.dto
DTO para agregar un nuevo miembro a un viaje.

AddMemberRequestDTO() - Constructor for class com.mapmyjourney.backend.dto.AddMemberRequestDTO

addMemberToTrip(Long, Long) - Method in class com.mapmyjourney.backend.service.TripService
Agrega un usuario a un viaje con rol VIEWER.

addMemberToTrip(Long, Long, TripMemberRole) - Method in class com.mapmyjourney.backend.service.TripMemberService
Agrega un nuevo miembro a un viaje.

ADMIN - Enum constant in enum class com.mapmyjourney.backend.model.enums.UserRole

authenticate(String, String) - Method in class com.mapmyjourney.backend.service.UserService
6.

authenticationManager(HttpSecurity) - Method in class com.mapmyjourney.backend.security.SecurityConfig
Configura el AuthenticationManager con DaoAuthenticationProvider.

authHealth() - Method in class com.mapmyjourney.backend.controller.HealthController
Verifica que el servicio de autenticación está disponible

B

BackendApplication - Class in com.mapmyjourney.backend
Clase principal para iniciar la aplicación Spring Boot.

BackendApplication() - Constructor for class com.mapmyjourney.backend.BackendApplication

C

changeMemberRole(Long, Long, ChangeMemberRoleRequestDTO) - Method in class com.mapmyjourney.backend.controller.TripMemberController
4.

changeMemberRole(Long, Long, TripMemberRole) - Method in class com.mapmyjourney.backend.service.TripMemberService
Cambia el rol de un miembro en un viaje.

ChangeMemberRoleRequestDTO - Class in com.mapmyjourney.backend.dto
DTO para cambiar el rol de un miembro en un viaje.

ChangeMemberRoleRequestDTO() - Constructor for class com.mapmyjourney.backend.dto.ChangeMemberRoleRequestDTO

com.mapmyjourney.backend - package com.mapmyjourney.backend

com.mapmyjourney.backend.config - package com.mapmyjourney.backend.config

com.mapmyjourney.backend.controller - package com.mapmyjourney.backend.controller

com.mapmyjourney.backend.dto - package com.mapmyjourney.backend.dto

com.mapmyjourney.backend.exception - package com.mapmyjourney.backend.exception

com.mapmyjourney.backend.model - package com.mapmyjourney.backend.model

com.mapmyjourney.backend.model.enums - package com.mapmyjourney.backend.model.enums

com.mapmyjourney.backend.repository - package com.mapmyjourney.backend.repository

com.mapmyjourney.backend.security - package com.mapmyjourney.backend.security

com.mapmyjourney.backend.service - package com.mapmyjourney.backend.service

CorsConfig - Class in com.mapmyjourney.backend.config
Configuración de CORS (Cross-Origin Resource Sharing) Permite que el frontend pueda hacer solicitudes al backend

CorsConfig() - Constructor for class com.mapmyjourney.backend.config.CorsConfig

corsConfigurationSource() - Method in class com.mapmyjourney.backend.security.SecurityConfig
Configura CORS para permitir solicitudes desde el frontend en localhost:4200.

corsFilter() - Method in class com.mapmyjourney.backend.config.WebConfig
Bean de CorsFilter - Ejecuta ANTES que Security Filters Esto es crítico para manejar preflight correctamente

createExpense(Long, ExpenseCreateRequestDTO) - Method in class com.mapmyjourney.backend.controller.ExpenseController
1.

createExpense(Long, ExpenseCreateRequestDTO, Long) - Method in class com.mapmyjourney.backend.service.ExpenseService
1.

createSplit(Long, CreateSplitRequestDTO) - Method in class com.mapmyjourney.backend.controller.ExpenseSplitController
1.

createSplit(Long, Long, BigDecimal, BigDecimal) - Method in class com.mapmyjourney.backend.service.ExpenseSplitService
Crea una nueva división de gasto.

CreateSplitRequestDTO - Class in com.mapmyjourney.backend.dto
DTO para crear una nueva división de gasto.

CreateSplitRequestDTO() - Constructor for class com.mapmyjourney.backend.dto.CreateSplitRequestDTO

createTrip(TripCreateRequestDTO) - Method in class com.mapmyjourney.backend.controller.TripController
1.

createTrip(TripCreateRequestDTO, Long) - Method in class com.mapmyjourney.backend.service.TripService
Crea un nuevo viaje.

CUSTOM - Enum constant in enum class com.mapmyjourney.backend.model.enums.ExpenseSplitType

customOpenAPI() - Method in class com.mapmyjourney.backend.config.OpenApiConfig

CustomUserDetailsService - Class in com.mapmyjourney.backend.security
Servicio para cargar detalles de usuario desde la base de datos.

CustomUserDetailsService() - Constructor for class com.mapmyjourney.backend.security.CustomUserDetailsService

D

daoAuthenticationProvider() - Method in class com.mapmyjourney.backend.security.SecurityConfig
Configura el proveedor de autenticación DAO.

DatabaseSeeder - Class in com.mapmyjourney.backend.config
Executes the SQL statements contained in `data.sql` when the database is empty.

DatabaseSeeder(JdbcTemplate, DataSource, Environment) - Constructor for class com.mapmyjourney.backend.config.DatabaseSeeder

deleteExpense(Long, Long) - Method in class com.mapmyjourney.backend.controller.ExpenseController
5.

deleteExpense(Long, Long) - Method in class com.mapmyjourney.backend.service.ExpenseService
Elimina un gasto.

deleteSplit(Long) - Method in class com.mapmyjourney.backend.service.ExpenseSplitService
Elimina una división de gasto.

deleteSplit(Long, Long) - Method in class com.mapmyjourney.backend.controller.ExpenseSplitController
6.

deleteTrip(Long) - Method in class com.mapmyjourney.backend.controller.TripController
6.

deleteTrip(Long, Long) - Method in class com.mapmyjourney.backend.service.TripService
Elimina un viaje.

deleteUser(Long) - Method in class com.mapmyjourney.backend.controller.UserController
7.

deleteUser(Long) - Method in class com.mapmyjourney.backend.service.UserService
5.

doFilterInternal(HttpServletRequest, HttpServletResponse, FilterChain) - Method in class com.mapmyjourney.backend.security.JwtAuthenticationFilter

DuplicateResourceException - Exception Class in com.mapmyjourney.backend.exception
Excepción para operaciones duplicadas (ej: usuario ya existe).

DuplicateResourceException(String) - Constructor for exception class com.mapmyjourney.backend.exception.DuplicateResourceException

DuplicateResourceException(String, Throwable) - Constructor for exception class com.mapmyjourney.backend.exception.DuplicateResourceException

E

EDITOR - Enum constant in enum class com.mapmyjourney.backend.model.enums.TripMemberRole

EQUAL - Enum constant in enum class com.mapmyjourney.backend.model.enums.ExpenseSplitType

ErrorResponseDTO - Class in com.mapmyjourney.backend.dto
DTO para respuestas de error de la API.

ErrorResponseDTO() - Constructor for class com.mapmyjourney.backend.dto.ErrorResponseDTO

existsByEmail(String) - Method in interface com.mapmyjourney.backend.repository.UserRepository
Verifica si existe un usuario con ese email.

Expense - Class in com.mapmyjourney.backend.model
Entidad que representa un gasto en un viaje.

Expense() - Constructor for class com.mapmyjourney.backend.model.Expense

ExpenseController - Class in com.mapmyjourney.backend.controller
Controlador REST para gestionar gastos en viajes.

ExpenseController() - Constructor for class com.mapmyjourney.backend.controller.ExpenseController

ExpenseCreateRequestDTO - Class in com.mapmyjourney.backend.dto
DTO para crear un nuevo gasto.

ExpenseCreateRequestDTO() - Constructor for class com.mapmyjourney.backend.dto.ExpenseCreateRequestDTO

ExpenseDTO - Class in com.mapmyjourney.backend.dto
DTO para información completa de un gasto.

ExpenseDTO() - Constructor for class com.mapmyjourney.backend.dto.ExpenseDTO

ExpenseRepository - Interface in com.mapmyjourney.backend.repository

ExpenseService - Class in com.mapmyjourney.backend.service

ExpenseService() - Constructor for class com.mapmyjourney.backend.service.ExpenseService

ExpenseSplit - Class in com.mapmyjourney.backend.model
Entidad que representa la división de un gasto entre un usuario.

ExpenseSplit() - Constructor for class com.mapmyjourney.backend.model.ExpenseSplit

ExpenseSplitController - Class in com.mapmyjourney.backend.controller
Controlador REST para gestionar divisiones de gastos.

ExpenseSplitController() - Constructor for class com.mapmyjourney.backend.controller.ExpenseSplitController

ExpenseSplitDTO - Class in com.mapmyjourney.backend.dto
DTO para una división de gasto.

ExpenseSplitDTO() - Constructor for class com.mapmyjourney.backend.dto.ExpenseSplitDTO

ExpenseSplitRepository - Interface in com.mapmyjourney.backend.repository

ExpenseSplitService - Class in com.mapmyjourney.backend.service
Servicio para gestionar las divisiones de gastos.

ExpenseSplitService() - Constructor for class com.mapmyjourney.backend.service.ExpenseSplitService

ExpenseSplitType - Enum Class in com.mapmyjourney.backend.model.enums
Enum que define cómo se divide un gasto entre los participantes.

extractEmail(String) - Method in class com.mapmyjourney.backend.security.JwtTokenProvider
Extrae el email del token JWT.

F

filterChain(HttpSecurity) - Method in class com.mapmyjourney.backend.security.SecurityConfig
Configura la cadena de filtros de seguridad HTTP.

findAllByTripId(Long) - Method in interface com.mapmyjourney.backend.repository.TripMemberRepository
Obtiene todos los miembros de un viaje.

findAllByUserId(Long) - Method in interface com.mapmyjourney.backend.repository.TripRepository
Obtiene todos los viajes donde el usuario es miembro.

findByEmail(String) - Method in interface com.mapmyjourney.backend.repository.UserRepository
Busca un usuario por su email.

findByExpenseId(Long) - Method in interface com.mapmyjourney.backend.repository.ExpenseSplitRepository
Obtiene todas las divisiones de un gasto.

findByParticipantIdAndPaidFalse(Long) - Method in interface com.mapmyjourney.backend.repository.ExpenseSplitRepository
Obtiene todas las divisiones no pagadas de un usuario.

findByTripCode(String) - Method in interface com.mapmyjourney.backend.repository.TripRepository
Busca un viaje por su código único (para invitaciones).

findByTripId(Long) - Method in interface com.mapmyjourney.backend.repository.ExpenseRepository
Obtiene todos los gastos de un viaje.

findByTripIdAndUserId(Long, Long) - Method in interface com.mapmyjourney.backend.repository.TripMemberRepository
Obtiene el rol de un usuario en un viaje.

G

generateToken(String) - Method in class com.mapmyjourney.backend.security.JwtTokenProvider
Genera un token JWT para el email proporcionado.

generateToken(Authentication) - Method in class com.mapmyjourney.backend.security.JwtTokenProvider
Genera un token JWT a partir de una Authentication.

getBudget() - Method in class com.mapmyjourney.backend.dto.TripCreateRequestDTO

getCurrentPassword() - Method in class com.mapmyjourney.backend.dto.UserUpdateRequestDTO

getDescription() - Method in class com.mapmyjourney.backend.dto.TripCreateRequestDTO

getDescription() - Method in enum class com.mapmyjourney.backend.model.enums.TripMemberRole

getDestination() - Method in class com.mapmyjourney.backend.dto.TripCreateRequestDTO

getDisplayName() - Method in enum class com.mapmyjourney.backend.model.enums.ExpenseSplitType

getDisplayName() - Method in enum class com.mapmyjourney.backend.model.enums.UserRole

getEmail() - Method in class com.mapmyjourney.backend.dto.LoginRequestDTO

getEmail() - Method in class com.mapmyjourney.backend.dto.UserCreateRequestDTO

getEmail() - Method in class com.mapmyjourney.backend.dto.UserUpdateRequestDTO

getEndDate() - Method in class com.mapmyjourney.backend.dto.TripCreateRequestDTO

getExpense(Long, Long) - Method in class com.mapmyjourney.backend.controller.ExpenseController
3.

getExpenseById(Long) - Method in class com.mapmyjourney.backend.service.ExpenseService
3.

getExpenseSplits(Long) - Method in class com.mapmyjourney.backend.controller.ExpenseSplitController
2.

getExpenseSplits(Long) - Method in class com.mapmyjourney.backend.service.ExpenseSplitService
Obtiene todas las divisiones de un gasto.

getExpirationTime() - Method in class com.mapmyjourney.backend.security.JwtTokenProvider
Retorna el tiempo de expiración del token en milisegundos.

getMember(Long, Long) - Method in class com.mapmyjourney.backend.controller.TripMemberController
3.

getMember(Long, Long) - Method in class com.mapmyjourney.backend.service.TripMemberService
Obtiene un miembro específico de un viaje.

getMyTrips(int, int) - Method in class com.mapmyjourney.backend.controller.TripController
3.

getName() - Method in class com.mapmyjourney.backend.dto.UserCreateRequestDTO

getName() - Method in class com.mapmyjourney.backend.dto.UserUpdateRequestDTO

getNewPassword() - Method in class com.mapmyjourney.backend.dto.UserUpdateRequestDTO

getNewPasswordConfirm() - Method in class com.mapmyjourney.backend.dto.UserUpdateRequestDTO

getPassword() - Method in class com.mapmyjourney.backend.dto.LoginRequestDTO

getPassword() - Method in class com.mapmyjourney.backend.dto.UserCreateRequestDTO

getProfilePicture() - Method in class com.mapmyjourney.backend.dto.UserUpdateRequestDTO

getSplit(Long) - Method in class com.mapmyjourney.backend.service.ExpenseSplitService
Obtiene una división específica por ID.

getSplit(Long, Long) - Method in class com.mapmyjourney.backend.controller.ExpenseSplitController
3.

getStartDate() - Method in class com.mapmyjourney.backend.dto.TripCreateRequestDTO

getTitle() - Method in class com.mapmyjourney.backend.dto.TripCreateRequestDTO

getTotalPendingDebt(Long) - Method in class com.mapmyjourney.backend.controller.ExpenseSplitController
8.

getTotalPendingDebt(Long) - Method in class com.mapmyjourney.backend.service.ExpenseSplitService
Calcula el total de deudas pendientes de un usuario.

getTotalSplits() - Method in class com.mapmyjourney.backend.model.Expense
Calcula el total de los splits.

getTripByCode(String) - Method in class com.mapmyjourney.backend.controller.TripController
4.

getTripByCode(String) - Method in class com.mapmyjourney.backend.service.TripService
Obtiene un viaje por su código (para invitaciones).

getTripById(Long) - Method in class com.mapmyjourney.backend.controller.TripController
2.

getTripById(Long) - Method in class com.mapmyjourney.backend.service.TripService
Obtiene un viaje por ID.

getTripExpenses(Long) - Method in class com.mapmyjourney.backend.service.ExpenseService
2.

getTripExpenses(Long, int, int) - Method in class com.mapmyjourney.backend.controller.ExpenseController
2.

getTripMembers(Long) - Method in class com.mapmyjourney.backend.controller.TripMemberController
2.

getTripMembers(Long) - Method in class com.mapmyjourney.backend.service.TripMemberService
Obtiene todos los miembros de un viaje.

getUserByEmail(String) - Method in class com.mapmyjourney.backend.controller.UserController
4.
getUserByEmail(String) - Method in class com.mapmyjourney.backend.service.UserService
3.
getUserById(Long) - Method in class com.mapmyjourney.backend.controller.UserController
3.
getUserById(Long) - Method in class com.mapmyjourney.backend.service.UserService
2.
getUserIdByEmail(String) - Method in class com.mapmyjourney.backend.service.UserService
Obtiene el ID del usuario a partir del email.
getUserPendingDebts(Long) - Method in class com.mapmyjourney.backend.controller.ExpenseSplitController
7.
getUserPendingDebts(Long) - Method in class com.mapmyjourney.backend.service.ExpenseSplitService
Obtiene todas las deudas pendientes de un usuario.
getUserTrips(Long) - Method in class com.mapmyjourney.backend.service.TripService
Obtiene todos los viajes del usuario.
GlobalExceptionHandler - Class in com.mapmyjourney.backend.config
Manejador global de excepciones para la API REST.
GlobalExceptionHandler() - Constructor for class com.mapmyjourney.backend.config.GlobalExceptionHandler

H

handleAccessDenied(AccessDeniedException) - Method in class com.mapmyjourney.backend.config.GlobalExceptionHandler
Maneja excepciones de acceso denegado (403).
handleAuthenticationException(AuthenticationException) - Method in class com.mapmyjourney.backend.config.GlobalExceptionHandler
Maneja excepciones generales de autenticación (401).
handleBadCredentials(BadCredentialsException) - Method in class com.mapmyjourney.backend.config.GlobalExceptionHandler
Maneja excepciones de credenciales inválidas (401).
handleDuplicateResource(DuplicateResourceException) - Method in class com.mapmyjourney.backend.config.GlobalExceptionHandler
Maneja excepciones de recurso duplicado (409).
handleGeneralException(Exception) - Method in class com.mapmyjourney.backend.config.GlobalExceptionHandler
Maneja todas las excepciones no capturadas (500).
handleResourceNotFound(ResourceNotFoundException) - Method in class com.mapmyjourney.backend.config.GlobalExceptionHandler
Maneja excepciones de recurso no encontrado (404).
handleValidationException(ValidationException) - Method in class com.mapmyjourney.backend.config.GlobalExceptionHandler
Maneja excepciones de validación.
handleValidationExceptions(MethodArgumentNotValidException) - Method in class com.mapmyjourney.backend.config.GlobalExceptionHandler
Maneja excepciones de validación de argumentos (ej: @Valid fallido).
hasPermission(TripMemberRole) - Method in enum class com.mapmyjourney.backend.model.enums.TripMemberRole
Verifica si este rol tiene un permiso específico.
hasPermission(TripMemberRole) - Method in class com.mapmyjourney.backend.model.TripMember
Verifica si este miembro tiene el permiso requerido.
hasRole(Long, Long, TripMemberRole) - Method in class com.mapmyjourney.backend.service.TripMemberService
Verifica si un usuario tiene un rol específico en un viaje.
health() - Method in class com.mapmyjourney.backend.controller.HealthController
Verifica que el servidor backend está disponible
HealthController - Class in com.mapmyjourney.backend.controller
Controlador para verificar el estado de los servicios del backend Usado por la página de estado para comprobar que el backend está disponible
HealthController() - Constructor for class com.mapmyjourney.backend.controller.HealthController

I

isMemberOfTrip(Long, Long) - Method in class com.mapmyjourney.backend.service.TripMemberService
Verifica si un usuario es miembro de un viaje.
isOwner() - Method in class com.mapmyjourney.backend.model.TripMember
Verifica si este miembro es el propietario del viaje.

J

JwtAuthenticationFilter - Class in com.mapmyjourney.backend.security

JwtAuthenticationFilter() - Constructor for class com.mapmyjourney.backend.security.JwtAuthenticationFilter

JwtTokenProvider - Class in com.mapmyjourney.backend.security

JwtTokenProvider() - Constructor for class com.mapmyjourney.backend.security.JwtTokenProvider

L

leaveTrip(Long) - Method in class com.mapmyjourney.backend.controller.TripMemberController
6.

loadUserByUsername(String) - Method in class com.mapmyjourney.backend.security.CustomUserDetailsService

login(LoginRequestDTO) - Method in class com.mapmyjourney.backend.controller.UserController
2.

LoginRequestDTO - Class in com.mapmyjourney.backend.dto
DTO para solicitud de login.

LoginRequestDTO() - Constructor for class com.mapmyjourney.backend.dto.LoginRequestDTO

LoginRequestDTO(String, String) - Constructor for class com.mapmyjourney.backend.dto.LoginRequestDTO

LoginResponseDTO - Class in com.mapmyjourney.backend.dto
DTO para respuesta de login (contiene el token JWT y datos del usuario).

LoginResponseDTO(String, Long, UserDTO) - Constructor for class com.mapmyjourney.backend.dto.LoginResponseDTO

LoginResponseDTO(String, String, Long, UserDTO) - Constructor for class com.mapmyjourney.backend.dto.LoginResponseDTO

M

main(String[]) - Static method in class com.mapmyjourney.backend.BackendApplication
Método principal que arranca la aplicación Spring Boot.

MANUAL - Enum constant in enum class com.mapmyjourney.backend.model.enums.ExpenseSplitType

markAsPaid(Long) - Method in class com.mapmyjourney.backend.service.ExpenseSplitService
Marca una división como pagada.

markAsUnpaid(Long) - Method in class com.mapmyjourney.backend.service.ExpenseSplitService
Marca una división como no pagada.

markSplitAsPaid(Long) - Method in class com.mapmyjourney.backend.service.ExpenseService
4.

markSplitAsPaid(Long, Long) - Method in class com.mapmyjourney.backend.controller.ExpenseSplitController
4.

markSplitAsUnpaid(Long, Long) - Method in class com.mapmyjourney.backend.controller.ExpenseSplitController
5.

O

onUpdate() - Method in class com.mapmyjourney.backend.model.Expense

onUpdate() - Method in class com.mapmyjourney.backend.model.User

OpenApiConfig - Class in com.mapmyjourney.backend.config
Configuración de OpenAPI/Swagger para la API REST.

OpenApiConfig() - Constructor for class com.mapmyjourney.backend.config.OpenApiConfig

OWNER - Enum constant in enum class com.mapmyjourney.backend.model.enums.TripMemberRole

P

passwordEncoder() - Method in class com.mapmyjourney.backend.security.SecurityConfig
Define el encoder de contraseñas (BCrypt).

PERCENTAGE - Enum constant in enum class com.mapmyjourney.backend.model.enums.ExpenseSplitType

R

registerUser(UserCreateRequestDTO) - Method in class com.mapmyjourney.backend.controller.UserController
1.

registerUser(UserCreateRequestDTO) - Method in class com.mapmyjourney.backend.service.UserService
1.

registerUserAndAuthenticate(UserCreateRequestDTO) - Method in class com.mapmyjourney.backend.service.UserService
Registra un nuevo usuario y lo autentica automáticamente.

removeMember(Long, Long) - Method in class com.mapmyjourney.backend.controller.TripMemberController
5.

removeMemberFromTrip(Long, Long) - Method in class com.mapmyjourney.backend.service.TripMemberService
Elimina un miembro de un viaje.

ResourceNotFoundException - Exception Class in com.mapmyjourney.backend.exception
Excepción base para errores de recursos no encontrados.

ResourceNotFoundException(String) - Constructor for exception class com.mapmyjourney.backend.exception.ResourceNotFoundException

ResourceNotFoundException(String, Throwable) - Constructor for exception class com.mapmyjourney.backend.exception.ResourceNotFoundException

run(String...) - Method in class com.mapmyjourney.backend.config.DatabaseSeeder

S

SecurityConfig - Class in com.mapmyjourney.backend.security
Configuración de Spring Security con JWT y CORS

SecurityConfig() - Constructor for class com.mapmyjourney.backend.security.SecurityConfig

setBudget(BigDecimal) - Method in class com.mapmyjourney.backend.dto.TripCreateRequestDTO

setCurrentPassword(String) - Method in class com.mapmyjourney.backend.dto.UserUpdateRequestDTO

setDescription(String) - Method in class com.mapmyjourney.backend.dto.TripCreateRequestDTO

setDestination(String) - Method in class com.mapmyjourney.backend.dto.TripCreateRequestDTO

setEmail(String) - Method in class com.mapmyjourney.backend.dto.LoginRequestDTO

setEmail(String) - Method in class com.mapmyjourney.backend.dto.UserCreateRequestDTO

setEmail(String) - Method in class com.mapmyjourney.backend.dto.UserUpdateRequestDTO

setEndDate(LocalDate) - Method in class com.mapmyjourney.backend.dto.TripCreateRequestDTO

setName(String) - Method in class com.mapmyjourney.backend.dto.UserCreateRequestDTO

setName(String) - Method in class com.mapmyjourney.backend.dto.UserUpdateRequestDTO

setNewPassword(String) - Method in class com.mapmyjourney.backend.dto.UserUpdateRequestDTO

setNewPasswordConfirm(String) - Method in class com.mapmyjourney.backend.dto.UserUpdateRequestDTO

setPassword(String) - Method in class com.mapmyjourney.backend.dto.LoginRequestDTO

setPassword(String) - Method in class com.mapmyjourney.backend.dto.UserCreateRequestDTO

setProfilePicture(String) - Method in class com.mapmyjourney.backend.dto.UserUpdateRequestDTO

setStartDate(LocalDate) - Method in class com.mapmyjourney.backend.dto.TripCreateRequestDTO

setTitle(String) - Method in class com.mapmyjourney.backend.dto.TripCreateRequestDTO

T

toString() - Method in class com.mapmyjourney.backend.dto.LoginRequestDTO

Trip - Class in com.mapmyjourney.backend.model
Entidad que representa un viaje colaborativo.

Trip() - Constructor for class com.mapmyjourney.backend.model.Trip

TripController - Class in com.mapmyjourney.backend.controller
Controlador REST para gestionar viajes.

TripController() - Constructor for class com.mapmyjourney.backend.controller.TripController

TripCreateRequestDTO - Class in com.mapmyjourney.backend.dto
DTO para crear un nuevo viaje.

TripCreateRequestDTO() - Constructor for class com.mapmyjourney.backend.dto.TripCreateRequestDTO

TripCreateRequestDTO(String, String, String, LocalDate, LocalDate, BigDecimal) - Constructor for class com.mapmyjourney.backend.dto.TripCreateRequestDTO

TripDTO - Class in com.mapmyjourney.backend.dto
DTO para información completa de un viaje.

TripDTO() - Constructor for class com.mapmyjourney.backend.dto.TripDTO

TripMember - Class in com.mapmyjourney.backend.model
Entidad que representa la relación entre un Usuario y un Viaje.

TripMember() - Constructor for class com.mapmyjourney.backend.model.TripMember

TripMemberController - Class in com.mapmyjourney.backend.controller
Controlador REST para gestionar miembros de viajes.

TripMemberController() - Constructor for class com.mapmyjourney.backend.controller.TripMemberController

TripMemberDTO - Class in com.mapmyjourney.backend.dto
DTO para información de un miembro de un viaje.

TripMemberDTO() - Constructor for class com.mapmyjourney.backend.dto.TripMemberDTO

TripMemberRepository - Interface in com.mapmyjourney.backend.repository

TripMemberRole - Enum Class in com.mapmyjourney.backend.model.enums
Enumeración que define los roles de un usuario dentro de un viaje.

TripMemberService - Class in com.mapmyjourney.backend.service

Servicio para gestionar la membresía de usuarios en viajes.

TripMemberService() - Constructor for class com.mapmyjourney.backend.service.TripMemberService

TripRepository - Interface in com.mapmyjourney.backend.repository

TripService - Class in com.mapmyjourney.backend.service

TripService() - Constructor for class com.mapmyjourney.backend.service.TripService

tripsHealth() - Method in class com.mapmyjourney.backend.controller.HealthController
Verifica que el servicio de viajes está disponible

U

updateExpense(Long, ExpenseCreateRequestDTO, Long) - Method in class com.mapmyjourney.backend.service.ExpenseService
Actualiza un gasto existente.

updateExpense(Long, Long, ExpenseCreateRequestDTO) - Method in class com.mapmyjourney.backend.controller.ExpenseController
4.

updateSplitAmount(Long, BigDecimal) - Method in class com.mapmyjourney.backend.service.ExpenseSplitService
Actualiza el monto de una división.

updateTrip(Long, TripCreateRequestDTO) - Method in class com.mapmyjourney.backend.controller.TripController
5.

updateTrip(Long, TripCreateRequestDTO, Long) - Method in class com.mapmyjourney.backend.service.TripService
Actualiza un viaje existente.

updateUser(Long, UserCreateRequestDTO) - Method in class com.mapmyjourney.backend.controller.UserController
5.

updateUser(Long, UserCreateRequestDTO) - Method in class com.mapmyjourney.backend.service.UserService
4.

updateUserProfile(Long, UserUpdateRequestDTO) - Method in class com.mapmyjourney.backend.controller.UserController
6.

updateUserProfile(Long, UserUpdateRequestDTO) - Method in class com.mapmyjourney.backend.service.UserService
Actualiza el perfil de un usuario existente.

User - Class in com.mapmyjourney.backend.model
Entidad que representa un usuario en el sistema.

User() - Constructor for class com.mapmyjourney.backend.model.User

USER - Enum constant in enum class com.mapmyjourney.backend.model.enums.UserRole

UserController - Class in com.mapmyjourney.backend.controller
Controlador REST para gestionar usuarios.

UserController() - Constructor for class com.mapmyjourney.backend.controller.UserController

UserCreateRequestDTO - Class in com.mapmyjourney.backend.dto
DTO para crear/registrar un nuevo usuario.

UserCreateRequestDTO() - Constructor for class com.mapmyjourney.backend.dto.UserCreateRequestDTO

UserCreateRequestDTO(String, String, String) - Constructor for class com.mapmyjourney.backend.dto.UserCreateRequestDTO

UserDTO - Class in com.mapmyjourney.backend.dto
DTO para información pública de un usuario.

UserDTO() - Constructor for class com.mapmyjourney.backend.dto.UserDTO

UserRepository - Interface in com.mapmyjourney.backend.repository

UserRole - Enum Class in com.mapmyjourney.backend.model.enums
Enum que define los roles de los usuarios en el sistema.

UserService - Class in com.mapmyjourney.backend.service

UserService() - Constructor for class com.mapmyjourney.backend.service.UserService

usersHealth() - Method in class com.mapmyjourney.backend.controller.HealthController
Verifica que el servicio de usuarios está disponible

UserUpdateRequestDTO - Class in com.mapmyjourney.backend.dto
DTO para actualizar datos de un usuario existente.

UserUpdateRequestDTO() - Constructor for class com.mapmyjourney.backend.dto.UserUpdateRequestDTO

UserUpdateRequestDTO(String, String, String) - Constructor for class com.mapmyjourney.backend.dto.UserUpdateRequestDTO

V

validateDatesAndUpdate() - Method in class com.mapmyjourney.backend.model.Trip
Valida que la fecha de fin sea posterior a la de inicio y actualiza timestamp.

validateToken(String) - Method in class com.mapmyjourney.backend.security.JwtTokenProvider
Valida que el token JWT sea válido.

ValidationException - Exception Class in com.mapmyjourney.backend.exception
Excepción para errores de negocio (ej: viaje con fechas inválidas).

ValidationException(String) - Constructor for exception class com.mapmyjourney.backend.exception.ValidationException

ValidationException(String, Throwable) - Constructor for exception class com.mapmyjourney.backend.exception.ValidationException

valueOf(String) - Static method in enum class com.mapmyjourney.backend.model.enums.ExpenseSplitType
Returns the enum constant of this class with the specified name.

valueOf(String) - Static method in enum class com.mapmyjourney.backend.model.enums.TripMemberRole
Returns the enum constant of this class with the specified name.

valueOf(String) - Static method in enum class com.mapmyjourney.backend.model.enums.UserRole
Returns the enum constant of this class with the specified name.

values() - Static method in enum class com.mapmyjourney.backend.model.enums.ExpenseSplitType
Returns an array containing the constants of this enum class, in the order they are declared.

values() - Static method in enum class com.mapmyjourney.backend.model.enums.TripMemberRole
Returns an array containing the constants of this enum class, in the order they are declared.
