

Package com.mapmyjourney.backend.security

Class SecurityConfig

java.lang.Object[↗]
com.mapmyjourney.backend.security.SecurityConfig

```
@Configuration
@EnableWebSecurity
@EnableMethodSecurity(prePostEnabled=true)
public class SecurityConfig
extends Object↗
```

Configuración de Spring Security con JWT y CORS. - Define rutas públicas (/register, /login, Swagger) - Protege endpoints privados que requieren autenticación - Configura CORS para Angular Frontend (localhost:4200) - Integra JwtAuthenticationFilter

Constructor Summary

Constructor
Description
SecurityConfig()

Method Summary

All Methods	Instance Methods	Concrete Methods
Modifier and Type	Method	Description
	org.springframework.security.authentication.AuthenticationManager	
	authenticationManager (org.springframework.security.config.annotation.web.builders.HttpSecurity http)	Configura el AuthenticationManager con DaoAuthenticationProvider.
	org.springframework.web.cors.CorsConfigurationSource	
	corsConfigurationSource ()	Configura CORS para permitir solicitudes desde el frontend en localhost:4200.
	org.springframework.security.authentication.dao.DaoAuthenticationProvider	
	daoAuthenticationProvider ()	Configura el proveedor de autenticación DAO.
	org.springframework.security.web.SecurityFilterChain	
	filterChain (org.springframework.security.config.annotation.web.builders.HttpSecurity http)	Configura la cadena de filtros de seguridad HTTP.
	org.springframework.security.crypto.password.PasswordEncoder	
	passwordEncoder ()	Define el encoder de contraseñas (BCrypt).

Constructor Details

SecurityConfig

```
public SecurityConfig()
```

Method Details

filterChain

```
@Bean
public org.springframework.security.web.SecurityFilterChain filterChain
(org.springframework.security.config.annotation.web.builders.HttpSecurity http)
    throws Exception
```

Configura la cadena de filtros de seguridad HTTP. Define rutas públicas y privadas, y configura CORS.

Throws:

[Exception](#)

corsConfigurationSource

```
@Bean
public org.springframework.web.cors.CorsConfigurationSource corsConfigurationSource()
```

Configura CORS para permitir solicitudes desde el frontend en localhost:4200.

authenticationManager

```
@Bean
public org.springframework.security.authentication.AuthenticationManager authenticationManager
(org.springframework.security.config.annotation.web.builders.HttpSecurity http)
    throws Exception
```

Configura el AuthenticationManager con DaoAuthenticationProvider.

Throws:

[Exception](#)

daoAuthenticationProvider

```
@Bean
public org.springframework.security.authentication.dao.DaoAuthenticationProvider daoAuthenticationProvider()
```

Configura el proveedor de autenticación DAO. Usa CustomUserDetailsService para cargar usuarios de la base de datos.

passwordEncoder

```
@Bean
public org.springframework.security.crypto.password.PasswordEncoder passwordEncoder()
```

Define el encoder de contraseñas (BCrypt).
