

Package com.mapmyjourney.backend.repository

Interface UserRepository

All Superinterfaces:

org.springframework.data.repository.CrudRepository<User, Long[↗]>,
org.springframework.data.jpa.repository.JpaRepository<User, Long[↗]>,
org.springframework.data.repository.ListCrudRepository<User, Long[↗]>,
org.springframework.data.repository.ListPagingAndSortingRepository<User, Long[↗]>,
org.springframework.data.repository.PagingAndSortingRepository<User, Long[↗]>,
org.springframework.data.repository.query.QueryByExampleExecutor<User>,
org.springframework.data.repository.Repository<User, Long[↗]>

@Repository
public interface **UserRepository**
extends org.springframework.data.jpa.repository.JpaRepository<User, Long[↗]>

Method Summary

- All Methods
- Instance Methods
- Abstract Methods

Modifier and Type	
Method	
Description	
boolean	
existsByEmail (String [↗] email)	
Verifica si existe un usuario con ese email.	
Optional [↗] <User>	
findByEmail (String [↗] email)	
Busca un usuario por su email.	
Methods inherited from interface org.springframework.data.repository.CrudRepository	
count, delete, deleteAll, deleteAll, deleteAllById, deleteById, existsById, findById, save	
Methods inherited from interface org.springframework.data.jpa.repository.JpaRepository	
deleteAllByIdInBatch, deleteAllInBatch, deleteAllInBatch, deleteInBatch, findAll, findAll, flush, getById, getOne, getReferenceById, saveAllAndFlush, saveAndFlush	
Methods inherited from interface org.springframework.data.repository.ListCrudRepository	
findAll, findAllById, saveAll	
Methods inherited from interface org.springframework.data.repository.ListPagingAndSortingRepository	
findAll	
Methods inherited from interface org.springframework.data.repository.PagingAndSortingRepository	
findAll	
Methods inherited from interface org.springframework.data.repository.query.QueryByExampleExecutor	
count, exists, findAll, findBy, findOne	

Method Details

findByEmail

`Optional<User> findByEmail(String email)`

Busca un usuario por su email.

Parameters:

email - el email del usuario

Returns:

Optional con el usuario si existe

existsByEmail

`boolean existsByEmail(String email)`

Verifica si existe un usuario con ese email.

Parameters:

email - el email a verificar

Returns:

true si existe, false si no
